

### Hints for the Data Table section of Excel Chapter 4, In the Lab 2

1. Make sure you have your formulas in row 4 correct.
2. Make sure your values in column E are correct.
3. Highlight cells E4:H21 and be sure to use cell C4 as the column input. Leave the row input blank.
4. Check pages Ex288-289 for a similar example of using the Data Table to fill a table based on formulas. Mimic what you did in these pages and it will work.
